

# Retrieval Grid

**TOP TIP**

Great for English, Sciences and History.

**Example, Biology**

Recall the four steps of natural selection.	Define adaptation and identify the three types.	Define selection pressures.
Construct a sentence to show the relationship between natural selection and evolution.	Use the example of Galapagos Tortoises to explain speciation.	Predict the result of changing selecting pressures on a cloned population.
Analyse a timeline of life on earth to describe the major changes over time.	Construct a flow chart to show how excessive use of antibiotics has lead to antibiotic resistance in bacterial populations.	Construct and defend a model to demonstrate natural selection in a population.

**Task**

Using content learned in class, create a retrieval grid to test your memory of facts, definitions, relationships and processes. When you've completed one, swap with a friend.
